Door Sizes

Doors available in a range of sizes.

Widths from 1'6" to 2'8".

Heights from 6'0" to 6'9".

The designs we use in our doors are interchangeable with other styles if required.

DecraFusion Designs

We bring you the brand new, up-to-the-minute monochrome collection. These hand made, miniature works of art, fused together at very high temperatures, will compliment any stylish home.

The tiles have a wonderful smoothness which not only looks great, but when used in conjunction with a Black CADRAM resin outline produce some stunning modern day designs.

Fusion Tiles and Glass Bevels

Striking tiles are made using age old techniques of melting and kiln-forming the glass. Designs also feature modern multi-faceted Glass Bevels to offer a totally different look.

A wide variety of colours and styles are available in the Fusion Range providing a perfect balance between the subtle sandblasted backing glass and the contemporary coloured molten tiles.

Sandblasting

Sandblasting offers a clean frosted finish which boasts unrivalled sharpness to the glass, even when the most intricate design is incorporated and gracefully enhances the tiles/bevels that are applied to the external surface of the glass

Sandblasting draws in ample light whilst offering high levels of privacy.

ARCHED TOP

French Door Option

As you may have already seen in the illustrations in this brochure, we are capable of making any style of door you require into French Doors (Size limitations apply to certain styles).

Traditional Lead and Film

This is the most commonly used system for creating decorative glass in the UK and is a simulation of original stained glass techniques. The designs are created by applying high quality UV stable film materials to the glass surface and finishing off with fine authentic lead lines. The addition of bevelled glass shapes in some designs adds a 3-dimensional quality to the glass. With this option, it is possible to change colours in the design and we offer several alternative lead colour & thickness options.

Resin Dispensing System (CADRAM)
Our Resin system offers an alternative, lead free decorative glass option that is cost effective.

The designs are manufactured using state of the art resin dispensing equipment to create the outline and the colours are hand mixed and applied by hand using pipettes to fill the required section. Due to the process involved in colouring, slight colour variations are not seen as faults but as adding character to the design.

Bespoke Designs

As an alternative to traditional lead and film, our CADRAM machine allows us to produce full coloured designs to your requirements.

For illustration purposes only.
